

Press Release. 14th February 2005

SPIRIT'S NEW WAREHOUSE MANAGEMENT SYSTEM

Spirit Data Capture Limited has announced the availability of Optimiser, a versatile new warehouse management system. This is a very powerful, comprehensive and highly flexible solution that can be configured to meet the needs of businesses of all sizes.

Optimiser can be installed quickly and is very easy to set up, configure and use. It can operate as a stand alone solution or can be integrated into a company's existing business system. It is very flexible, and its extensive functionality provides users with complete and instant control over stock movements - through applications that include goods receipt and despatch, stock maintenance, and reporting. It also has a full audit log, so that any actions can be fully tracked.

The new solution allows users to define each specific warehouse location in a range of different formats - right down to the level of zone, aisle, column and row. Spirit can offer customers advice about the most efficient configurations for their specific business. The owner of each stock item can also be defined, ensuring that no items are received or despatched against the wrong customer.

Kevin Thomas, Spirit's Sales Director, says: "We are delighted to be able to offer Optimiser to our customers. It complements many of our other products: for instance, it is supported by most of the mobile computers we supply from different manufacturers. To complete the picture, we also offer a range of services for anyone interested in Optimiser. These include installation and commissioning, training, and solution support."

Ebbie Khadem, Spirit's Managing Director, adds: "This is one of the most advanced and most cost-effective warehouse management solutions available. It represents yet another valuable addition to our wide selection of automated data collection hardware and software."

ENDS

Notes for Editors: Spirit Data Capture is based in Preston Brook, Cheshire. The company is a totally independent mobile computing and data capture house, with in-depth knowledge of the latest wireless and mobile computing technologies which boost productivity and profitability. Its services include planning, design and development, implementation, and support.
