

Press release. 13th March 2018

Spirit's new electronic Proof of Delivery (ePoD) app will appeal to many market sectors

Spirit Data Capture Limited, the specialist independent mobile enterprise consultancy, has recently launched a new, off-the-shelf ePoD app that will streamline a range of logistics and distribution processes. The app can be installed on a wide range of handheld devices (such as smartphones and tablets) and is suitable for many different market sectors, including food, manufacturing and logistics, distribution, courier services and wholesale.

The app has several modules, so users can pick the specific ones that they need. They include Warehousing; Vehicle Inspections; Task Management; Deliveries; Return to Depot; and Customer Surveys. The app will integrate easily with existing systems and, along with the web dashboard, can be customised with a company's own brand, colours and logo.

The ePoD app is operating system agnostic – versions are available in Android, iOS and Windows. Ultimately, it provides accurate, real-time proof of deliveries and collections, minimising the possibility of human error. Customers can therefore be billed more rapidly and the app also provides reports that will help to resolve any disputes.

Ebbie Khadem, Spirit's Managing Director, comments: "We're delighted to be able to offer this very versatile and effective application to our customers. We believe that it will boost the efficiency, reliability and productivity of their distribution operations, leading to greater customer satisfaction."

ENDS

Notes for Editors: Spirit Data Capture is an independent consultancy specialising in mobile enterprise solutions. Based in Sutton Weaver, Cheshire, the company has extensive experience of wireless and mobile computing technologies. It is committed to sourcing solutions that will streamline its customers' operations and boost their productivity.

Spirit's capabilities include software application development; hardware (including handheld and wearable devices, mobile printers and wireless infrastructure); mobile device management; wireless network implementation; maintenance; and many other services. Its extensive client base includes organisations in the utilities, field service, transport and logistics, healthcare, government and manufacturing sectors.
